 **TOYOTA**
MATERIAL HANDLING

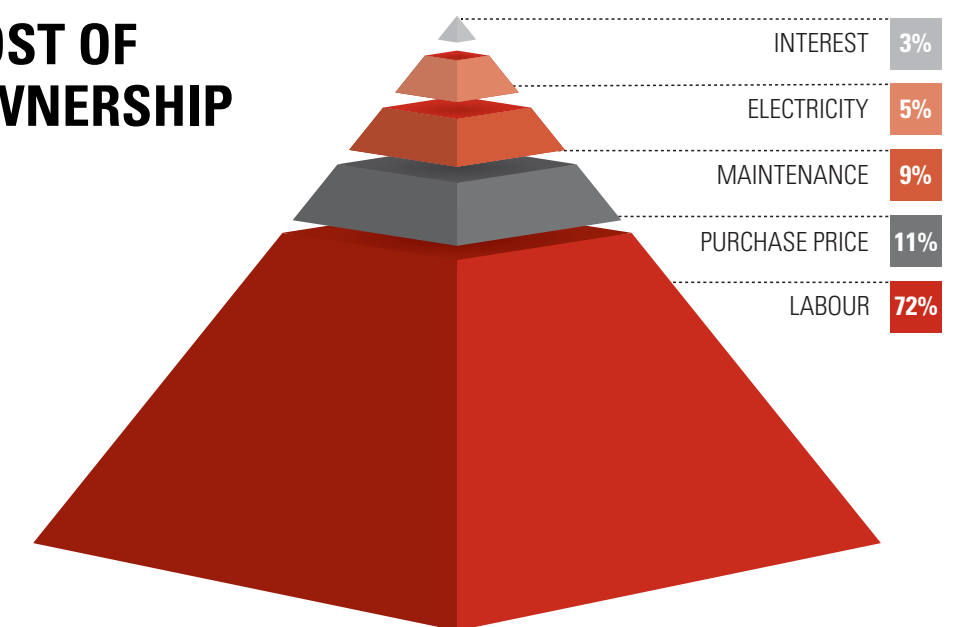

OUR JOB IS GETTING YOUR JOB DONE.

We're all expected to make more out of less. Move more pallets in less time. And even do more work with less resources.

With labour making up to 72% of the cost of owning a lift truck, you need a solution that optimises your current workforce and resources. That's why the 8000 Series pallet trucks are designed to hit the ground running. It's why we make trucks that move more pallets per hour. Deliver dramatically lower maintenance costs and superior energy efficiency. And never compromise on reliability and durability. Because we understand the cost of doing business. And because we know how to help you get the most out of your resources.

COST OF OWNERSHIP

DO MORE WITH **WAY MORE.**

With the 8000 Series pallet trucks, performance goes beyond just the basic components. Performance means greater productivity, efficiency, reliability, ease of maintenance and operator comfort. It means standardising heavy-duty components that combine optimal strength and durability. It means operator-friendly ergonomics that make your operations run smoother. It even means up to a 6%* increase in productivity over the competition that lets you move more pallets per day. It means performance without compromise. And it means that with us you get more-way more.

»» KEEP YOUR WORKFORCE IN «« **WORKING CONDITION.**

Your trucks need to stay in operation. That's why the 8000 Series pallet trucks are built to last. Heavy-duty components from tractor to fork provide optimum strength and durability. We source best-in-class components and utilise proven innovative technology to lower maintenance costs, reduce downtime and ensure longer vehicle and component life. With undercarriage components designed for reduced wear and maintainability, you'll have more uptime and lower costs. And behind it all is the best warranty in the business—*Asset Protection™*.

- Heavy-duty ductile iron undercarriage components provide greater flexibility and improved wear
- A heavy-duty drive motor is paired with the industry's toughest steering system of 50 solid-steel ball bearings
- Heavy-duty end bell bracket protects the motor
- Programmable travel speed to lift height enables travel speed to be reduced until the forks are raised to a specific height, preventing wear by slowing travel when the forks are fully lowered
- Enhanced drive tire debris diversion comes standard
- Robust control systems are designed to endure cold and wet environments
- Composite bushings are stronger than steel alternatives and never require greasing
- Grab bar electronic controls are sealed and waterproofed for wet environments and wash downs, and a one-piece rubberised cover replaces individual plastic buttons for longer component life

The 8000 Series pallet trucks provide the durability you rely on from the brand you trust.

Under-clearance without vulnerable parts or components.

Heavy-duty, optimal bumper guard features 13 mm steel wrapped around a 13 mm rubber core to further absorb and diffuse impacts from the frame and components.

DRIVEN BY EFFICIENCY. »»»»» ACCELERATED BY »»»»» **ECO-PERFORMANCE.**

The 8000 Series pallet trucks deliver efficiency and productivity with every pallet move. We call this Eco-Performance. You'll call it economising without compromise. Our smoother, quicker acceleration lowers time spent traveling between picks. Longer battery life gives you up to 33%* more power when you need it. So charging can happen after a shift, instead of interrupting it. We combine proven technology with finely tuned engineering to deliver superior performance that other trucks can't match in efficiency, productivity, or cost.

SAVES POWER Do more work with less power. In fact, the 8000 Series pallet trucks use up to 33%* less energy than the competition, saving you recharging costs.

REDUCES CO₂ Fewer carbon emissions come from fewer battery changes. That means maximum ecologic benefits for the planet and greater energy savings for you.

INCREASES PRODUCTIVITY Up to 6%* more productive than the competition, the 8000 Series pallet trucks move more pallets per hour. Which means less downtime and more productivity.

LOWERS COSTS With fewer battery changes, you'll pick more cases. That gives you the lowest cost per pallet moved.

ENGINEERED FOR EVERY MOVE THAT KEEPS YOU MOVING.

The 8000 Series pallet trucks go beyond your expectations. By enhancing our ergonomic designs, we ensure that operator comfort remains high throughout the day. That way, productivity and performance stay high while driver discomfort and fatigue remain low. PowerSteer reduces steer effort by up to 90%, giving your operators steer assistance when they need it most—at slower speeds. Low step heights to roomy, padded platforms and compartments come standard, for greater comfort. Another way that we keep you moving.

Easy step-through access to either side of the aisle comes standard with roomy operator compartments on the Model 8510 center rider pallet truck and Model 8610 tow tractor.

» MORE «

IS THE NEW STANDARD.

In low-level order picking, seconds matter. Smooth, quick, acceleration saves time spent traveling between picks. The Coast *PRO*® system can be activated with only one hand and combined with the conveniently located one-step trigger to jog the truck, minimises extra steps and increases your operator's productivity when order picking. Enhanced fork design streamlines pallet entry and exit, and keeps your operations in motion. All of which boost productivity up to 6%* over the competition.

With the 8000 Series, we have redefined the industry standard for pallet trucks. The result is greater productivity and increased efficiency. More reliability with fewer moving parts. More pallets moved with less energy and less effort. And at the end of the day, a lower total cost of ownership.

→ WHY ←
CHOOSE US?

When you purchase from us, you don't just get products. You get solutions to problems. We look at your entire operation and make recommendations based on your unique needs, evaluating performance across the whole cycle, across the whole shift. Choosing Toyota means working with sales and service professionals who represent the leading provider of material handling solutions. We have the resources and technology to help your operations work smarter.
